

TB7300 base stations come with two front mounting brackets attached as standard. The TB7300 Wall Mounting Kit comes with two additional brackets.

TB7300 base stations can be wall mounted by rotating the two front mounting brackets and fitting the two mounting brackets supplied with the kit to the rear of the chassis.

Contents of Kit

Part	Part Number	Quantity
Rack mounting bracket	302-05279-00	2
Button head socket screw M5×8	346-00005-08	4

Wall-Mounted Installation

- 1 Use a 3mm hexkey to unscrew the two front mounting brackets. Rotate the brackets 90° and fasten them in place.
- 2 In the same orientation, attach the two mounting kit brackets to the rear of the chassis.

Notice Tait does not recommend mounting the base station with airflow from top to bottom (front panel facing up).

- 3 When wall mounting, ensure the airflow is from bottom to top **1** (front panel facing down), or side to side **2**. The base station will perform best in these orientations.

Notice If airflow is obstructed, recirculating air may overheat the base station. When mounting the base station, ensure intakes and exhausts are not obstructed.

Recommended wall-mounted configurations for the TB7300 base station
